

Shapers' activities in the area of tool manufacturing

In order to ensure that its projects run smoothly and are controlled by highly experienced and qualified teams, Shapers' makes many skills available to its customers, such as:

- Part development
- Moldflow studies
- Prototype moulds
- Moulds and parts studies
- Mouldmaking (injection, compression, overmoulding, bi-components tools, etc...)
- The implementation of checking fixtures and control
- Trials and pre-production manufacture
- Low volume production

{morfeo 1}

The Shapers' mission: To make its skills available to its customers in order to propose to them turn-key solutions for their production and to meet any type of requirement.

Our other skills

- Machining
- Industrial maintenance

Management of global and international projects: global worldcars

Today, manufacturing strategy is undergoing a period of major change. The car industry is developing worldwide platforms with a single model produced and launched simultaneously at several locations around the globe.

Thanks to its worldwide presence, Shapers' can provide optimum support for these projects.

- A unique tooling concept is created and duplicated on all the Shapers' sites involved
- Manufacture of moulds based on European standards and expertise
- Economic benefit

The greatest success of Shapers' in this context is the C346 project, developed with Ford in Germany and Plastal in Spain, with Decoma Russia in Eastern Europe and with Ford in the United States.
